ROHIT MAHAR

Frontend Developer | Mumbai, India

therohitmahar@gmail.com | Portfolio | LinkedIn | GitHub

Frontend developer with 2+ years building React, Next.js, and TypeScript products, with a focus on data-heavy interfaces, rendering performance, and reusable components.

EXPERIENCE

Front-End Developer | LineupX, Mumbai Apr 2024 - Present

SaaS startup backed by SINE (IIT Bombay)

- Implemented row and column virtualization in the Candidate Database table using @tanstack/react-virtual to render visible rows and columns with overscan. Investigated re-renders with React Profiler and applied memoization.
- Memoized Candidate Database query state and retained cached rows during refetches with TanStack Query, preserving table content while updated results loaded.
- Developed frontend assessment workflows and integrated screen recording and camera-based proctoring.
- Redesigned candidate-field settings, replacing a section dropdown with sidebar navigation.
- Worked directly with users to clarify requests and explain features; reproduced reported issues and coordinated fixes with product and backend teams.

Front-End Developer Intern | LineupX, Mumbai Nov 2023 - Apr 2024

- Developed SaaS interfaces using React, Next.js, SCSS, Chart.js, and React Table; translated Figma designs into responsive screens.
- Integrated Redux state management and supported debugging and performance improvements; converted to full-time based on performance.

SELECTED PROJECTS

PR Tracker | Next.js App Router, TypeScript, IndexedDB Live

- Built a GitHub activity dashboard that synced 3,000+ PR records across repositories to show merge rates and activity trends.
- Saved sync checkpoints and cached results in IndexedDB so interrupted or rate-limited imports could resume; coordinated browser tabs to prevent duplicate syncs.
- Implemented App Router route handlers and a typed GitHub service layer for sync batches, session checks, and rate-limit responses.
- Built custom visit and referral tracking with a dashboard to view traffic sources, without third-party analytics services.

Context Flow AI | React, TypeScript, Zustand, React Flow Live | Source

- Built a visual workspace for composing AI prompts from reusable context blocks and @mentions. Used Zustand to manage graph edits, undo/redo, and recovery of saved local and cloud drafts.

Next Shelf | React Native, Expo, TypeScript Live

- Built a reading tracker with search across 2,000+ books via Open Library and on-device storage for progress and reviews. Implemented versioned JSON backup/restore, with Jest tests for older backups and reading-status changes.

SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, React Native, HTML, CSS
State & integration: Redux Toolkit, Zustand, Context API, REST APIs
UI & tooling: SCSS, Tailwind CSS, Chart.js, React Table, React Flow, Git
Testing & performance: Jest, React Profiler, browser DevTools, memoization, code splitting

EDUCATION

Bachelor of Computer Applications | Chandrabhan Sharma College, Mumbai
2021
